Zilta application

In big cities, many people try to save time. In many families, both the husband and wife work full-time, so their free time is very important to them. They look for quick and convenient ways to do their shopping and things they need to do so that they will have free time for the things they want to do.

Thanks to the presence of internet and smart phones or other devices which allow people to shop online. We can order our meals and some of goods online but have you ever think how much time you lose or consume when you want to buy clothes, watch and etc for a party or a meeting? We can purchase these things online too.

I know that there are some websites which you can buy online but they are imperfect and the most important factor is owners benefit from these websites! And approximately near 95% of shops and even more do not use the online system to advertise their goods.

We can build such an application for phones. Then our customers will be people who want to buy goods and owners who need our software (application) to introduce their goods to people.

See, I am in the middle east. When I google a website to buy a coat for instance, it brings me a shop in Sandford!! This is not logical and even if I want to shop from this store by any chance, you might know how much I must pay extra for mailing expenses!

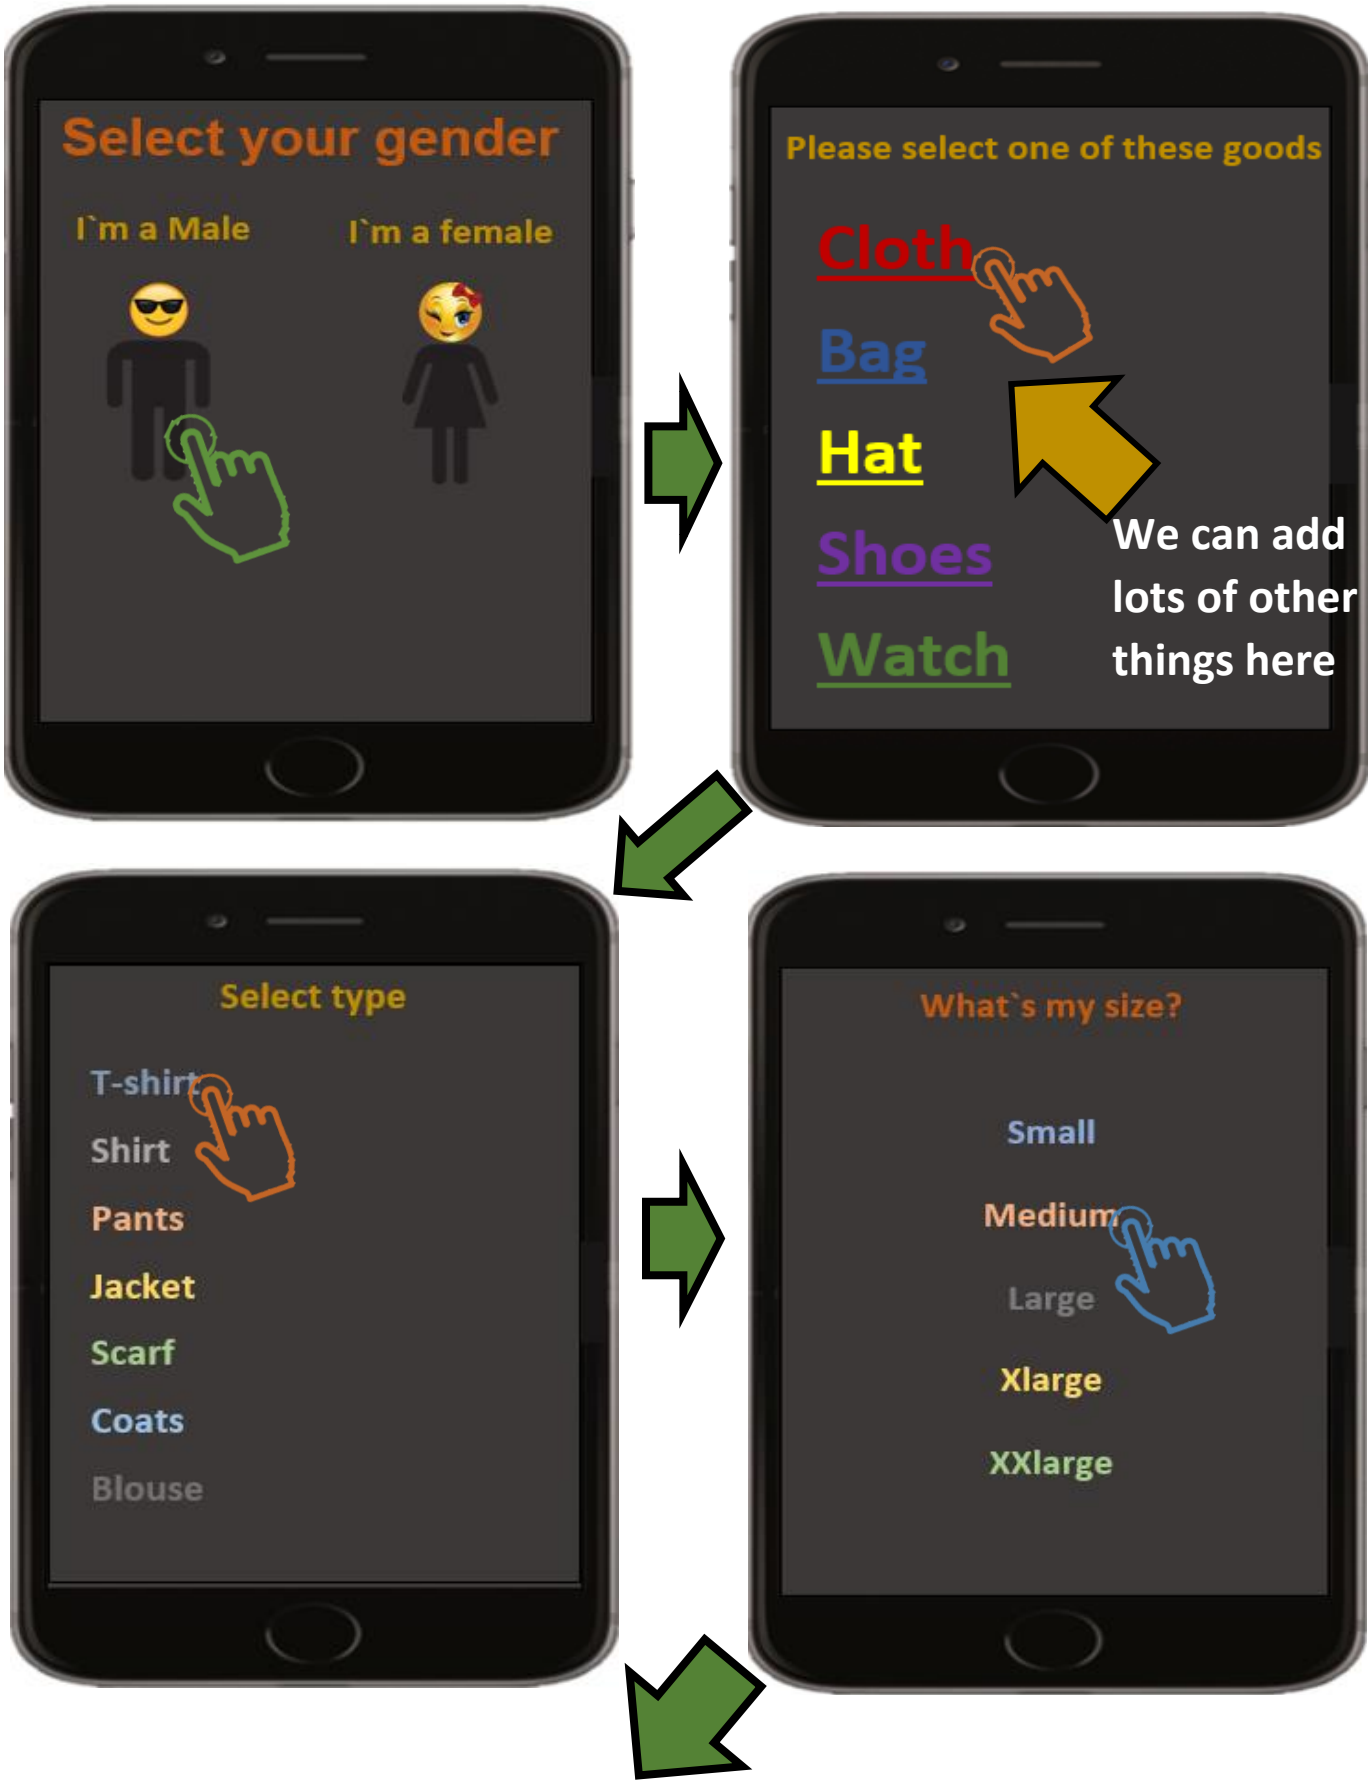
All of us need to buy our products as earliest as possible with the lowest prices. This means that via this application it enables us to find our products we are looking for. We do not need to spend time and go window shopping and search all stores on foot to find what we want. Secondly, we can buy online from this application. Thirdly, it gives us addresses of shops which they have these goods and we can find

the product and go and buy it in person if we like and if it is necessary. Fourthly, it saves much of our time. Finally, it would have lots of interest for the owner of this application since all people and all companies will use this application to buy or advertise their goods.

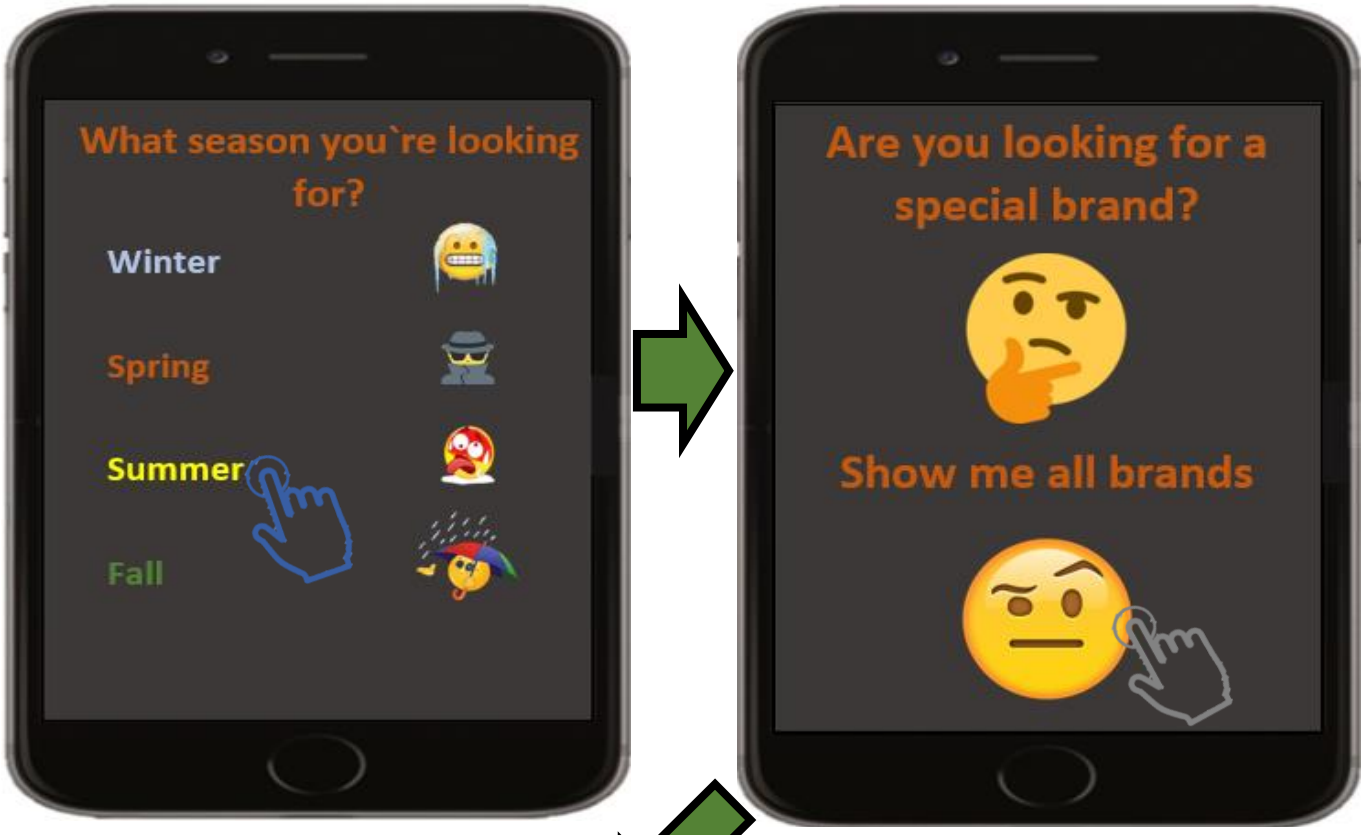
Here`s an outline of application which I meant:

For running this application, we need: Wi-Fi and Location

The location will offer the customer the nearest shops available.



Select your gender
I`m a Male
I`m a female
Please select one of these goods
Cloth
Bag
Hat
Shoes
Watch
We can add lots of other things here
Select type
T-shirt
Shirt
Pants
Jacket
Scarf
Coats
Blouse
What`s my size?
Small
Medium
Large
Xlarge
XXlarge



What season you`re looking for?
Winter
Spring
Summer
Fall
